EnhancedGlist - Unstable Builds

Beta builds are designed for testing purposes, if you decided to use a beta version, you should do so in a test server, in a server where you're okay with resetting things, otherwise always take frequently backups during beta stage. If you find any bug please make a detailed bug report so I can track the bug and make a fix.

I do my best to test all things during beta stage, but unfortunately I cannot test every possible situation. Your contribution and help is very appreciated, EnhancedGlist relies on server owners who are willing to take the risk of testing beta versions because if many people tests beta versions plugin will be stable within a short period of time.
